

What is Claimed is:

1. A dispenser assembly in the refrigerator having a body and a door for opening/closing a front surface of the body, comprising:
 - a dispenser in the front surface of the door for supplying water;
 - a hinge coupled between the door and the body;
 - a water supply pipe passed through insides of the hinge and the door, and connected to the dispenser; and
 - a curved holding member above the hinge to surround and hold the water supply pipe.
2. The dispenser assembly as claimed in claim 1, wherein the holding member has an inside diameter smaller than an outside diameter of the water supply pipe.
3. The dispenser assembly as claimed in claim 1, wherein the holding member has an opening for inserting the water supply pipe therethrough.
4. The dispenser assembly as claimed in claim 3, wherein the holding member has holes in the other side surface for pushing out the water supply pipe inserted therein.
5. The dispenser assembly as claimed in claim 3, wherein the holding member has projections from opposite sides of the opening at upper and lower ends of the holding member.
6. The dispenser assembly as claimed in claim 5, wherein the holding member has an inside diameter at the portion of the projections smaller than an outside diameter of the water supply pipe.

7. The dispenser assembly as claimed in claim 3, wherein the holding member has a semi-cylindrical form having one opened side surface.

8. The dispenser assembly as claimed in claim 7, wherein the holding member has an inside diameter smaller than an outside diameter of the water supply pipe.

9. The dispenser assembly as claimed in claim 1, wherein the holding member has a reinforcing rib for preventing the holding member from breaking by an elastic force of the water supply pipe.

10. The dispenser assembly as claimed in claim 1, further comprising recess portions in a top portion of the door and the hinge portion having the water supply pipe passed therethrough.

11. A refrigerator comprising:

a body;

a door for opening/closing a front surface of the body;

a dispenser in the front surface of the door for supplying water;

a hinge coupled between the door and the body;

a water supply pipe passed through insides of the hinge and the door, and connected to the dispenser;

a hinge cover for covering and protecting the water supply pipe; and

a curved holding member above the hinge to surround and hold the water supply pipe.

12. The refrigerator as claimed in claim 11, wherein the holding member has an inside diameter smaller than an outside diameter of the water supply pipe.

13. The refrigerator as claimed in claim 11, wherein the holding member has an opening for inserting the water supply pipe therethrough.

14. The refrigerator as claimed in claim 13, wherein the holding member has holes in the other side surface for pushing out the water supply pipe inserted therein.

15. The refrigerator as claimed in claim 13, wherein the holding member has projections from opposite sides of the opening at upper and lower ends of the holding member.

16. The refrigerator as claimed in claim 15, wherein the holding member has an inside diameter at the portion of the projections smaller than an outside diameter of the water supply pipe.

17. The refrigerator as claimed in claim 13, wherein the holding member has a semi-cylindrical form having one opened side surface.

18. The refrigerator as claimed in claim 17, wherein the holding member has an inside diameter smaller than an outside diameter of the water supply pipe.

19. The refrigerator as claimed in claim 11, wherein the holding member has a

reinforcing rib for preventing the holding member from breaking by an elastic force of the water supply pipe.

20. The refrigerator as claimed in claim 11, further comprising recess portions in a top portion of the door and the hinge portion having the water supply pipe passed therethrough.
